GARDENING AND MENTAL HEALTH

Gardening and strong mental health seemingly go hand-in-hand. A study published in 2018 in the journal Clinical Medicine found that exposure to plants and green space, and particularly to gardening, is beneficial to both physical and mental health. Penn State Extension says working with the soil and plants can help relax the mind and have a grounding effect on the gardener, as gardening can help to reduce stress, anxiety and even built-up anger. Gardening also helps a person connect to the current moment and not be caught up in their mind. Nearly all forms of exercise, gardening included, can lighten mood and lower levels of stress and anxiety. Also, routines, such as spending a certain portion of the day weeding or tending to gardening needs, creates a soothing rhythm to ease stress.

SURVIVING SEASONAL ALLERGIES

Rising temperatures and the reemergence of wildlife make spring a popular time of year. But the blooming flowers and blossoming trees of spring may not be a wonder to behold for seasonal allergy sufferers. Trees, flowers and grasses are ripe with pollen this time of year, which can produce a bevy of symptoms for people with seasonal allergies.

The Asthma and Allergy Foundation of America says more than 106 million people in the United States have allergies and/or asthma. Coping with allergies often comes down to a multi-pronged approach that may involve medication and lifestyle changes.

The Mayo Clinic says that oral antihistamines (particularly non-drowsy, second-generation options) combined with nasal steroid sprays can reduce inflammation and congestion and alleviate sneezing, itchy noses and eyes. Decongestants can offer temporary relief of nasal congestion, while saline nasal sprays and rinses can help wash out pollen and mucus.

Individuals can modify their activities by avoiding the outdoors

SURVIVING... CONTINUED FROM PAGE 8

when allergens are very high. When coming in from outdoors, remove clothing and launder it right away to keep allergens from transferring to furniture and bedding. When pollen counts are high, windows and doors should remain shut and HVAC systems should be run with a fresh filter to help mitigate any allergens already in the air. Allergy sufferers also can look into a HEPA room air filter to clear indoor air even more.

Should over-the-counter options and lifestyle changes prove ineffective, seek medical advice. This is especially true if allergies cause intense sinus pressure, difficulty breathing or wheezing. Long-term or prescription treatments like immunotherapy could be the next step to find relief.

LOW-CALORIE, NUTRIENT-RICH FOODS TO HELP YOU MAINTAIN OVERALL HEALTH

A nutritious diet is a notable foundation of a healthy lifestyle. When paired with routine exercise, a healthy diet can help people feel better physically and mentally and reduce their risk for various chronic diseases.

Temptation combined with the accessibility and convenience of unhealthy foods makes it easy to compromise a healthy diet. When planning meals and snacks, adults looking to stay a nutritious course can incorporate a variety of low-calorie, nutrient-dense foods into their diets.

The Mayo Clinic notes that most vegetables are naturally very low in calories but high in volume or weight. The weight in many vegetables comes from water and fiber, not calories. The fiber content in vegetables also can make people feel fuller longer, reducing the likelihood of between-meal snacking on unhealthy but convenient foods like potato chips. The Mayo Clinic cites these vegetables as low-calorie options that are high in water and fiber:

• Salad greens • Asparagus • Carrots • Tomatoes • Broccoli • Zucchini

Incorporating more low-calorie and water- and fiber-rich vegetables into your existing diet is not difficult. For example, the Mayo Clinic recommends adding vegetables to pasta dishes as a replacement for meat and cheese. When reaching for a between-meal snack, opt for carrots or broccoli over chips, pretzels or baked goods.

Fruits also make a healthy addition to a daily diet, though the Mayo Clinic warns that some fruits are better than others for people looking for low-calorie, nutrient-dense options. The online medical resource Healthline notes that avocados typically contain 161 calories per 100-gram serving, which equals about half of a medium-sized avocado. That makes avocados a high-calorie fruit compared to some alternatives. Bananas also tend to be higher in calories than other fruits, as Healthline reports a medium-sized banana (105 calories) contains 27 grams of carbohydrates. Avocados and bananas pack a nutritional punch, but it's important that people seeking low-calorie fruits to add to their diet recognize that each fruit tends to be on the high end in regard to calories.

Fortunately, there are plenty of low-calorie and flavorful fruits that can make great additions to a healthy diet. Strawberries are loaded with flavor and rich in vitamin C and fiber, and a 100-gram serving of this popular fruit contains around 32 calories. Watermelon (30 calories per 100 grams), cantaloupe (34 calories), honeydew melon (36 calories), and peaches (39 calories) are some additional low-calorie fruits that make great additions to a nutritious diet. Eating right involves consumption of healthy foods like fruits and vegetables, which tend to be low in calories and nutrient-rich.

Where the Past Fuels the Future!

PERENNIALS TO CONSIDER FOR YOUR GARDEN THIS YEAR

Gardening is a rewarding hobby that provides a great reason to get outdoors. Getting one's hands dirty in the garden often pays off with a colorful, awe-inspiring and aesthetically appealing finished product.

Perennials are plants that live multiple years. Even though perennials may die back above ground each winter, their roots remain alive, which is why the colorful blooms typically return anew once warm weather makes a comeback. Gardeners who want to capitalize on the hardiness of perennials can consider these plants for their gardens this season.

- Coreopsis: Coreopsis are perennials that thrive in a wide range of conditions, including various types of soil. So gardeners who find their soil is predominantly clay as well as those with sandy soil may be able to successfully plant coreopsis on their properties. Better Homes & Gardens notes coreopsis are native to the United States and produce colorful blooms that can withstand hot and dry weather throughout the summer.

- Russian sage: Russian sage produce purplish-blue flowers that BHG notes retain their color for weeks. Russian sage can be planted in a variety of the hardiness zones defined by the U.S. Depart-

PERENNIALS... CONTINUED FROM PAGE 12

ment of Agriculture, and many gardening experts recommend them to gardeners whose local climates tend to be especially hot and dry.

· **Hellebore:** BHG notes hellebore are ideal for gardeners who want some color in the early days of spring. Hellebore, sometimes referred to as "Lenten Roses," have an early flowering season, so their blooms, which can be pink, white, purple, yellow, green, rose, or purple, can be a welcome sign in spring.

· **Baptisia:** Gardening experts note these purple-blooming perennials thrive in sun. Gardeners who want perennials with particularly long life expectancies can consider baptisia, as experts note they can live for many decades. Baptisia are drought-tolerant, and they can grow in soil that may not be considered great for other plants.

· **Coneflower:** The unique look of coneflowers has generated many enthusiasts of these perennials that bloom from early summer to fall. Coneflowers are highly adaptable, making them capable of growing in various zones and soil types. Once established, coneflowers are considered very drought-tolerant.

Perennials can add aesthetic appeal to landscapes year after year. Gardeners are urged to speak to experts at local gardening centers to identify the perfect plants for their gardens.

Did you know?

A well-manicured lawn appeals to homeowners when they look out their windows.

But such a view also can look nice when homeowners peruse their bank statements after selling a property. According to the "2023 Remodeling Impact Report: Outdoor Features" from the National Association of Realtors®, standard lawn care service yields an estimated cost recovery of 217 percent. Landscape maintenance, with an estimated cost recovery of 104 percent, and an overall landscape upgrade (100 percent) also yield great returns for homeowners. The NAR® report also noted the effects of such projects related to homeowners' desire to spend time on their property. Among homeowners who participated in the NAR® report and committed to standard lawn care service, 58 percent indicated they had a greater desire to be at home since completing the project, while 46 percent indicated they have an increased sense of enjoyment when spending time at home.

PECANS TWEAK THE FLAVOR PROFILE OF BELOVED BAKED GOOD

When it comes to baked goods, it's hard to deny the appeal of a homemade brownie. Whether eaten on their own or paired with ice cream, brownies are a welcome treat that few can resist. Though chocolate dominates the flavor profile of brownies, these beloved treats can be enhanced with additional delicious ingredients, like pecans. Anyone who wants to throw a little extra flavor into their next batch of brownies can consider this recipe for "Pecan Brownies" from Lines+Angles.

PECAN BROWNIES

Makes 12 brownies

12 ounces plain dark chocolate, 70 percent cocoa solids

2 sticks of butter

3 large eggs

1 1/4 cup dark brown sugar

1/4 cup flour

1 teaspoon baking powder

1/2 teaspoon salt

5 ounces chopped pecan nuts

TO DECORATE:

Icing sugar

1. Heat the oven to 325 F. Grease an 7" x 11" rectangular baking dish and line the base with non-stick baking paper.

2. Put the chocolate and butter in a pan and heat gently, stirring until melted. Allow to cool slightly.

3. Whisk the eggs in a mixing bowl until pale and frothy, then add the sugar, a spoonful at a time, whisking until thick and glossy.

4. Gently fold in the melted chocolate mixture. Sift in the flour, baking powder and salt and fold in the pecan nuts.

5. Spoon the mixture into the baking dish, level with the back of a spoon and bake for 40 minutes, until the top has a cracked appearance and the center is still a little soft to the touch. Do not overbake, or you will lose the famous sticky brownie texture. Cool in the pan.

6. Cut into slices and sift over a little icing sugar.

BAD BOY MOWERS
MOW WITH AN *Attitude*

ALL ★★★★★ LINEUP

Every Bad Boy Mower, from the very beginning, has been built from heavy gauge, all-American steel, fabricated and welded to last a lifetime. While our strength has become legendary to professionals and demanding homeowners alike, we've also led the industry with innovation after innovation, patent after patent, and up and down our mower line you'll find the perfect combination of standard features and engine options—all for an incredible price-for-performance value.

Small farms are the lifeblood of rural communities.

According to the Farm Bureau, 97 percent of American farms are owned by families. Small family farms make up the majority of farms nationwide and operate a higher share of acres altogether than any other farm size. It's important to note that the distinction "family farm" does not necessarily always mean a small-scale operation. Ten percent of farms owned by families generate more than \$350,000 in annual revenue. Despite this, small-scale farms are mired in a long-term decline, according to recent U.S. Department of Agriculture reports. Driven by economic pressures, government policies generally are favoring large operations, consolidation and tighter competition.

5 CHALLENGES FACING MODERN FARMERS

Agriculture is a building block of nations. The United States Department of Agriculture reports 22.1 million full-and part-time jobs were related to the agricultural and food sectors in 2022, representing 10.4 percent of total U.S. employment. Statistics Canada reports agriculture in Canada employed around 280,000 people as of 2023. Today's farmers face a convergence of environmental, social and economic pressures. Each of these pressures has the potential to threaten the stability of the global food supply. The following are five notable challenges facing modern farmers.

1. Extreme weather: Climate change has moved from a theory to a current reality for many farmers. Growing seasons have become much less predictable as frost dates and heat waves have shifted when plants can be sowed and harvested. Farmers also are increasingly dealing with too much or too little water, each of which can destroy crops.

2. Financial squeeze: Farmers are increasingly facing economic pressures. The price of fuel, seeds and fertilizers has become highly volatile. The American Farm Bureau Foundation says fertilizer

prices in 2025 climbed high again as global trade shifted, energy costs rose and geopolitical risks reshaped supply. Farming requires massive capital investments tied to machinery and land. High interest rates can make it difficult for farmers to pay the debt required to stay operational. In addition, farmers typically have little control over the market price of their products, leaving them vulnerable to global trade wars.

3. Labor shortages: Finding and retaining agricultural labor is a big crisis. The average age of farmers globally is rising, says the International Labour Organisation and the American Farm Bureau Foundation. In the U.S. and the European Union, the average farmer is nearly 60 years old. The AFBF reports that, despite increased wages, nearly 50 percent of farmers struggle to find enough workers to harvest seasonal crops.

4. Sustainability transitions: Compliance costs are high for the farmers who have opted to transition to more sustainable farming practices. Transitioning to Net Zero agriculture requires significant capital, according to the World Economic Forum. The WEF estimates there is a multi-trillion dollar investment gap to move global agriculture toward sustainable practices. And while regenerative farming improves soil health, the initial transition period can produce yield variations that threaten the livelihoods of small farmers.

5. Digital divide: The Organisation for Economic Co-operation and Development has raised concerns that small-scale farmers lack the infrastructure like high-speed internet necessary to use tools designed to increase efficiency. Plus, groups like the National Farmers Union have testified that software locks on farming equipment create dependency on manufacturers that can strip farmers of their independence.

Modern farmers face various challenges that have persisted for ages and also newer problems tied to the modern, increasingly technology-based world.

Lyme disease

affects thousands of people every year.

But instances of the disease may be under-reported.

The Bay Area Lyme Foundation estimates more than 630,000 people are diagnosed with Lyme disease annually in the United States. However, the Centers for Disease Control and Prevention says only a portion of those cases are officially reported through surveillance each year. Tick-borne illnesses are rising due to climate change and human expansion into forested areas. Lyme disease is just one of the many illnesses that ticks can spread. Unlike some other illnesses, Lyme disease can be contracted even if you've been bitten before. There is no immunity development in the body. Left untreated, Lyme disease can cause serious issues with joints, the heart and the nervous system, says the Cleveland Clinic. However, if diagnosed in the early stages, Lyme disease can be successfully cured with prompt antibiotic administration. MedlinePlus says use of doxycycline is highly effective at curing the infection and preventing long-term complications. It generally takes two to four weeks of oral antibiotic administration to eradicate Lyme disease. However, while most patients make a full recovery, some may experience lingering fatigue or pain even after the infection is gone. This is known as Post-Treatment Lyme Disease Syndrome.
